EDUCATION

Royal Melbourne Institute of Technology (RMIT University)

Melbourne, VIC

Bachelor of Software Engineering, Minor in Cyber Security

Jun. 2023 – Dec 2027 (expected)

- Concentrations: Full-stack Development Artificial Intelligence, Software Design
- Relevant Coursework: Full Stack Development, Cloud Security, Cyber Security Attack Analysis and Incident Response, Algorithms and Data Structures, Object-Oriented Programming, Approaches to Intelligence (AI)

ESoft Metro Campus

Panadura, Sri Lanka

Diploma in IT

Aug. 2021 – Aug 2022

PROJECTS

Venue Vendors (VV) – Full-Stack Venue Booking Platform

React (TypeScript), Node.js, Express, TypeORM, MS SQL Server, Axios, Git/GitHub

2026

- Architected and built a full-stack venue booking platform supporting three role-based user types (hirer, vendor, and admin) by developing a React TypeScript front end that communicates via Axios with a Node.js/Express REST API backed by a cloud-hosted MS SQL Server database
- Strengthened data integrity across sign-up, sign-in, and booking workflows by implementing dual-layer validation, client-side checks in React paired with corresponding middleware validation in the Express API, including a multi-criteria password policy.
- Enabled vendors to independently manage their listings by building full CRUD interfaces for venue details, timeslot availability, and applicant approval/rejection, reducing manual coordination between hirers and vendors
- Maintained a production-quality TypeScript codebase with zero compilation errors (npm run build) across separate front-end and back-end projects, delivered through a structured two-person agile workflow on GitHub using feature branches, pull requests, and issue tracking

MazeRunner System | *Java, OOP, Algorithms, Software Testing, Git*

2025

- Achieved 100% valid-maze detection across 25+ automated test cases by engineering a custom DFS/BFS validation pipeline in Java to flag invalid entrances, isolated cells, and structural cycles
- Cut manual debugging time by 40% by automating structural integrity checks and integrating them into a Git-based workflow with feature branches, pull requests, and issue tracking
- Extended the core system into a 3D visualization tool by building an automated block-placement engine that renders text-based maze data inside Minecraft

Smart Crypto Trading Bot | *Python, Binance API, Streamlit, Cloud (Digital Ocean)*

2025 - Present

- Built a 24/7 automated trading pipeline by developing a Python bot with a custom RSI-based strategy, validated through iterative backtesting and deployed as a persistent daemon on a Digital Ocean cloud server
- Enabled real-time market data ingestion, order execution, and trade validation by integrating the Binance API, with a Streamlit dashboard for live monitoring and strategy control

WORK EXPERIENCE

Crew Coach & Team Leader

Nov 2023 – Present

McDonald's Australia

Melbourne, VIC

- Accelerated on-boarding for 14+ new crew members by designing structured training materials and hands-on certification checklists, reducing time-to-independence on shift
- Sustained service quality across a 6-person team during peak rush periods by proactively reallocating tasks and resolving operational bottlenecks in real time
- Improved shift efficiency during high-volume periods by partnering with management to redesign workflow processes and staffing rotations

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, C++, SQL, HTML/CSS

Frameworks: React, Node.js, Express, TypeORM, Streamlit

Developer Tools: Git/GitHub, REST APIs, MS SQL Server, Cloud Deployment (Digital Ocean), Linux, macOS

Core CS: Data Structures and Algorithms, Object-Oriented Programming, Agile / Pair Programming

Honors: Zonal Chess Champion **Languages:** English, Sinhala
